WV-INBRE Next Generation Sequencing Small Grant Program

The WV-INBRE program supports biomedical research which relies on Next Generation Sequencing (NGS) technology. NGS enables the rapid and relatively inexpensive high throughput sequencing of whole genomes, whole exomes, whole mRNA transcriptomes (via RNA-Seq) and the genomes of complex microbial communities known as microbiomes. analyses can enable the discovery of disease susceptibility variants, metabolic or signal transduction pathways, and changing composition of microbiomes.

In each year of phase III, WV-INBRE will solicit NGS research applications through a request for applications. The solicitations are open to investigators at West Virginia University, Marshall work.

New WV-INBRE Mentoring Core Established

-INBRE grant last year, a new posi- ly to provide some guidelines and tion - WV-INBRE Mentoring Co- suggestions for the responsibilities ordinator - has been established and expectations outline the miniwithin the WV-INBRE Administra- mum responsibilities of the mentor tive Core. Andrew (Drew) K. Shi- and the PI relationship. The two emke, Ph.D. an associate professor parties can then add to these miniof Biochemistry at West Virginia mal expectations, as long as they University (WVU) and a member are spelled out in the agreement and of the WV-INBRE Administrative agreed to by both parties. Core has been selected to serve in this capacity.

As the WV-INBRE Mentoring Coordinator, Dr. Shiemke will assist principal investigators (PI's) from the PUIs in identifying a mentor and ensure that the relationship between the mentor and the PI satisfies the expectations of both parties. To facilitate the latter task, he is developing a Mentoring Agreement that describes the minimal expectations for both the mentor and the PI.

The Mentoring Agreement for the major PUI Research Awards is nearly complete, and a slightly different agreement for the Faculty Research Development Awards (FRDA) is also in preparation. For both types of awards the mentor and the PI will be required to submit a brief checklist every six months that the Mentoring Coordinator will use to monitor the effectiveness of the relationship.

The purpose of the Mentoring Agreements is to help the mentor and the PI on a WV-INBRE funded project to more clearly define their responsibilities and expectations within the confines of their relationship. Since each relationship is unique, the agreement allows for some variation in the roles of the mentor and the PI. The Men-

With the renewal of the WV toring Agreement is designed mere-

In the case of mentors for the major multi-year awards, one of the primary responsibilities is to assist the PI to develop a timeline and a research plan to accomplish the milestones that have been established for these awards. The mentor is also expected to review and edit abstracts, manuscripts and grant proposals prior to their submission by the PI.

The mentor is also expected to review and attend the PI's annual progress report presentation to the **INBRE Steering Committee and** External Advisory Committee. In addition at the PI's request, the mentor will discuss research management strategies, help locate resources and solutions to research problems, and help identify meetings and workshops that will benefit the PI's research productivity.

At present, the expectations for mentors on the Faculty Research Development Awards are in the early stages of development. It is anticipated they will include: (1) reviewing the initial proposal, (2) providing advice on experimental approaches, (3) providing assistance with data analysis, and (4) reviewing and editing abstracts and manuscripts.

The main responsibility of the

PI in both the major PUI Research Awards and FRDA Mentoring Agreements is to establish (in collaboration with the mentor) a concrete plan for the frequency and type of contact (phone, email, faceto-face), in order to keep the mentor up to date on the progress of the research project. For the first year of the mentoring relationship contacts between the mentor and the mentee should be frequent, at least as often as once a month. In later years of the relationship, the contacts may be less frequent, but should still occur at least once every six to eight weeks. The mentee should also provide the mentor with a list of their professional responsibilities (teaching, research, administrative, and committee work) in order to facilitate development of realistic goals and timelines for achieving them.

These Mentoring Agreements should facilitate more productive relationships between the mentors and the PIs by clearly defining their respective responsibilities. If you have any suggestions for additions or improvements to these mentoring agreements please contact Dr. Drew Shiemke at:

ashiemke@hsc.wvu.edu
